Title: My little yard
Name: Yang Zhang
Email: zhangya6@oregonstate.edu

I want to make a yard for the final project. The yard is made up of five objects. All objects are 3D. I've drawn a draft, it's easy for you to understand. The bottom box is the lawn. I'm going to add a grass texture to it. There is a house above the lawn. The roof, walls and door of the house will be different colors. There will be a tall windmill next to the house. The four blades of the windmill rotate counterclockwise. I can control whether the windmill stop or moving by pressing the button. There is a car beside the windmill. The car consists of two cuboids and four tires. The car will travel clockwise on the open space. I can control whether the car stop or moving by pressing the button. There will be a little yellow ball on top of it. It will be the sun. We can control whether it lights up by pressing the key. I'll try my best to make this painting look beautiful.
