Looking for any research/internship opportunity that will improve my skills and knowledge as a computer scientist.

PROJECTS

iOS and Web Project Management Application for eBay(Ongoing)   Fall 2019

· The project management application has two front-end client that runs on iOS and the web. The web application is built with React, React-router, and Firebase as a back-end. The iOS application is built with Swift, and Firebase as a back-end. The system uses Firebase's authentication, hosting, Firestore database, and storage services, which serves as a back-end.

Full Stack Recipe Website   Winter 2018

· A full stack recipe website that runs on PHP, and MySQL database system. Both database and the client are hosted on OSU server. Session system, hashing, and SQL injection prevention are integrated into the system.

Echofly - Music Recording/streaming Website   Winter 2017

· An audio recording/streaming website, which allows users to be able to record their singing and sharing it on the system. MangoDB is used, and it was hosted on the OSU server.

TECHNICAL STRENGTHS

Programming technology	React, Javascript, Java, JavaFX, Haskell
Software & Tools	Node.js, Latex, Git, Github
Language	English, Mandarin, Malay, Cantonese

EXPERIENCE

eBay sponsored Project, iOS/Web Project Management Application   Fall 2019
Project Manager

· Mentored under eBay to effectively build and manage the development of an application. Provided me the real-world team-based experience with the software engineering design and delivery cycle, including requirements analysis and specification, design techniques, and requirements and final project written documentation.
